FIXED POINTS THEOREM FOR WEAK COMPATIBLE MULTI-VALUED MAPPINGS IN G_p -METRIC SPACES

SEHER SULTAN SEPET AND CAFER AYDIN

ABSTRACT

Recently, Nadler [1], introduced the notion of multi-valued contraction mapping and proved well known Banach contraction principle. Aydi at al., [2] proved the Banach type fixed point results for set valued mapping in complete metric spaces (see [3, 4] and references therein). Zand and Nezhad [5], introduced a new generalized metric spaces G_p which as a both generalization of the partial metric space and G metric spaces. We present an extension of the notion of f -weak compatibility of Pathak [6] on metric space in generalization of partial metric space.
