A FIXED POINT THEOREM FOR θ -CONTRACTIVITY IN G_p -METRIC SPACES

SEHER SULTAN SEPET AND CAFER AYDIN

ABSTRACT

Recently, Jleli and Samet [1] introduced a new type of contractive mappings. Jleli and Samet called it as θ -contraction and proved a fixed point theorem for mappings of this type for which the Banach contraction principle and some other known contractive conditions in the literature can be obtained as special cases. Zand and Nezhad [2], introduced a new generalized metric spaces G_p which as a both generalization of the partial metric space and G metric spaces. Some of these works may be noted in [3, 4, 5]. We present an extension of the notion of θ -contraction of Jleli and Samet [1] in generalization of partial metric space.
